

I am a huge fan of satellite radio and listen to it in my car and at home. I would welcome having instant updates local on traffic but more important the instant updates on weather would be very helpful during the hurricane season. Although I have several radios that have that capability I listen to satellite radio because I pay for this service and it is commercial free which means more entertainment less of the DJ's chatter and commercials. I do not believe in banning new technologies or service simple because they will affect the bottom line of established providers. America is a nation of free enterprise!! This is the system that has made America a country of choices, technology advances in medicine, air and space travel, entertainment, finance, and has vastly improve our standard of living. Every new step forward usually means that some of the older technologies will get a smaller piece of the pie! I don 't feel the FCC should become the protector of established technology and use it's power and influence to stifle newer technology and services. I'm a registered voter and vote in all local, state and national elections.
Sincerely

Thomas K. Knight
